

Double action controller with analogue output 1/8 DIN - 48 x 96 mm gammadue® series X3 line

Analogue control within everyone's reach

Including Auto/Man selection
and digital inputs for external
activation of:

- Stored Setpoints
 - Timer function
 - Setpoint programmable profile
- the gammadue® X3 line
is simple, yet is suitable to satisfy
almost all control needs:
- time proportioning
 - analogue
 - single or double action
 - valve drive

gammadue[®]

the right solution to your needs

Your needs	Our solutions
Heaters failure	Heater break alarm with current transformer
Use of different actuators	Analogue output, heat/cool (linear, water, oil), valve control output
Easy replacement and quick start-up	Configuration by simple to use codes
Correct tuning for any condition	Automatic selection between two different tuning methods
Alarm signalling	Absolute, band and deviation alarms, Latching/Blocking
Interfacing with other devices	Serial communications at 9600 baud Modbus/Jbus protocol, analogue retransmission output, Remote Setpoint and 3 digital inputs
Frequent Setpoint change	Two stored Setpoints selected by keypad, serial communications or digital inputs
Quick learning	Every model has the same operating method
Ergonomic compatibility with other devices	Two colours: beige or darkgrey front panels
Environmental protection	IP65 front panel protection (indoor, dust and water protection)
Easy to use	Ergonomic keypad, clear and comprehensive display
Noise immunity	Electromagnetic compatibility
Universal input signals, linear as well as non-linear	Configurable input (TC, RTD, mA, Volt and ΔT, infrared sensor, "custom" linearisation)
Costs reduction	Built-in Timer and Start-up functions
Reliability and safety	CE compatibility, ASCON is ISO 9001 certified, 3 years warranty
Technical support	Technical application assistance from ASCON sales and after sales service

Special functions

To improve the instrument performance and to reduce the wiring and installation costs, two special functions are available:

- Start-up

- Timer

The use of these functions avoids additional device installation (e.g. external timer), therefore allowing a significant costs reduction.

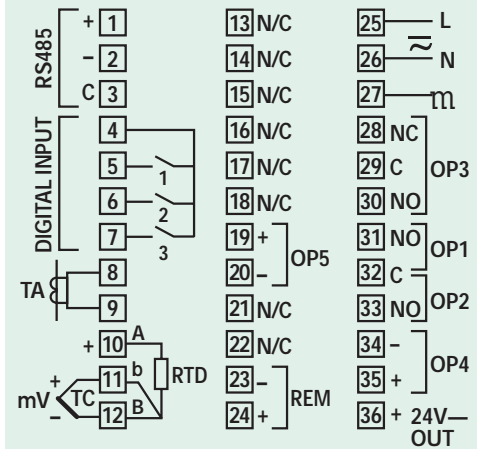

Moreover there are:

- **Keypad lock/unlock** function, to avoid incorrect operator actions
- **Outputs lock/unlock** function, at any moment it is possible to stop the control action, but not the process variable display, without switching-off the power supply.

Fuzzy-Tuning

Two methods of tuning are available:

- Auto-Tuning "one shot"
- Natural frequency "one shot"

The **Fuzzy-Tuning** automatically selects one of the two methods which assure the best result for each condition.

The **Auto-Tuning** method works best on the step response basis.

When activated, if a deviation exists between the Setpoint and process variable larger than 5% of scale range, the controller modifies the output value. Then, in a short time, it calculates the PID parameters and the new algorithm is operational immediately.

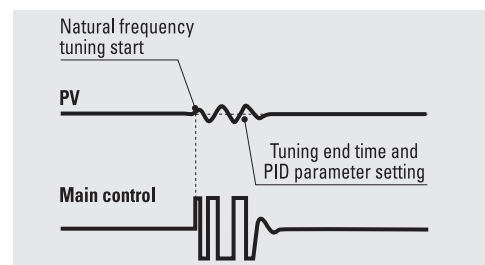

The main advantages of this method are fast calculation and quick implementation.

The **Natural frequency** method works best when the process variable is very near to the Setpoint.

When activated, it causes a process oscillation around the Setpoint value.

The main advantage of this method is a reduced disturbance to the process.
